ReaDI-Watch seeks to transform the way companies manage R&D.

Track, record and manage your R&D projects in real-time and on the cloud.

Get the best return on R&D investment and maximise R&D tax credits and grants.

It is a simple and effective tool for companies who are investing in their future.

Construction R&D and Innovation Insights

The Construction Sector is going through a phase of a transformation. Trends such as Design for Manufactured Assembly, Digital Technologies and others are coming to the forefront.

However, there is often a self-perception that Construction companies are not "Innovative", or doing "Qualifying R&D". We are working with Construction companies to change this thinking. There is a significant amount of R&D and Innovation in the Construction sector.

"Qualifying R&D" in this context means that the activity meets the requirements for R&D Tax Credits or Grants. The following list is non exhaustive but may be useful to identify potentially Qualifying R&D Activities:

Potential "Qualifying R&D" Activities

- Alternative material combinations
- Energy efficiency advances or improvement
- New / Improved Design functions
- Electrical system improvements
- HVAC system advances
- Plant production system
- Construction equipment development
- Building information modelling (BIM)
- New modular off-site fabrication
- Unique infrastructure advancements
- Structure and facility advancements
- Sustainable / Green advances
- Cyber Physical System Developments
